Photo 001: cell E6 dewatering

Photo 002: cell E6

Photo 032: first truck to dispose of waste (1:45 PM Friday) in the newly repaired section of cell E6. The waste in this truck is HPOWER residue, which is considered "special" waste under the permit. Special waste is the first layer of waste in a new cell, with size limits on any single piece of waste so that large pieces of waste material don't inadvertently puncture the new liner.

Photo 047: 36" drain inlet located approximately in (future) cell E8. Armored with boulders to help protect it from debris.

Photo 044: Looking up-canyon at re-grading (flattening) of (future) cell E8 to slow down stormwater. The 36" drain is located in the bouldery area on the left.
